

1, Types of mediums ?

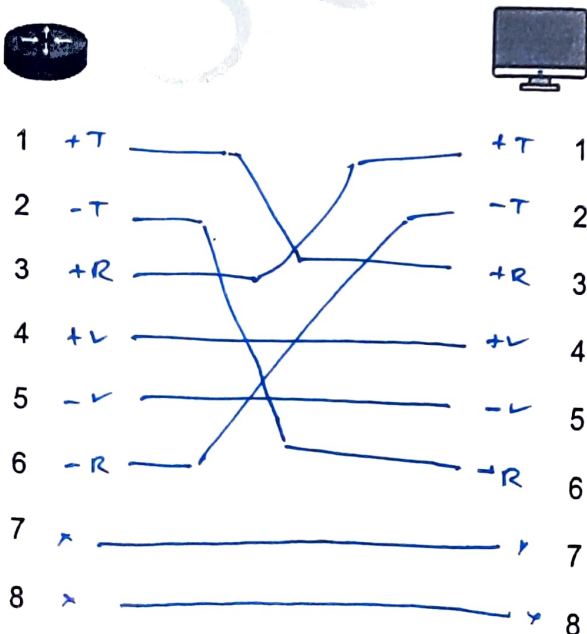

wired mediums - UTP, STP, Coaxial Cable, fibre optic cable.

wireless mediums - Wi-Fi / Radio waves, microwave
Infrared, Satellite.

2, Write down switch 8-pins ?

- 1 +T
- 2 -T
- 3 +R
- 4 +V
- 5 -V
- 6 -R
- 7 not used
- 8 not used.

3, Connect utp cable between two devices

4, Explain AUTO MDIX ?

Automatic Medium-Dependent Interface Crossover

It allows an ethernet interface to automatically detect whether the connected cable needs straight-through or crossover behaviour and adjust the transmit/receive pairs accordingly.

5, Explain POE injector ?

A PoE injector adds electrical power to an Ethernet cable while allowing data to pass through the same cable.

* IP camera

* WAP

6, Explain POE switch ?

A PoE switch is a network switch that can provide both data and electrical power through Ethernet cables to compatible devices.

* IP camera.

7, Explain types of nic & function ?

1. Ethernet NIC - wired NIC

Uses copper UTP/STP cable. Common speed 100 Mbps to 10Gbps. Sends and receives network frames through a wired connections.

2. wireless NIC - wi-fi NIC

Used to connect a device or device to a network without an Ethernet cable.

Converts data into wireless radio signals for transmissions and converts received radio signals back into data.

3. Fibre - Optic Nic

Sends and receives data using light signals through optical fiber.
